Hortonworks Data Platform: Apache Ambari Release Notes

Copyright © 2012-2017 Hortonworks, Inc. All rights reserved.

The Hortonworks Data Platform, powered by Apache Hadoop, is a massively scalable and 100% open source platform for storing, processing and analyzing large volumes of data. It is designed to deal with data from many sources and formats in a very quick, easy and cost-effective manner. The Hortonworks Data Platform consists of the essential set of Apache Hadoop projects including MapReduce, Hadoop Distributed File System (HDFS), HCatalog, Pig, Hive, HBase, ZooKeeper and Ambari. Hortonworks is the major contributor of code and patches to many of these projects. These projects have been integrated and tested as part of the Hortonworks Data Platform release process and installation and configuration tools have also been included.

Unlike other providers of platforms built using Apache Hadoop, Hortonworks contributes 100% of our code back to the Apache Software Foundation. The Hortonworks Data Platform is Apache-licensed and completely open source. We sell only expert technical support, [training](#) and partner-enablement services. All of our technology is, and will remain free and open source. Please visit the [Hortonworks Data Platform](#) page for more information on Hortonworks technology. For more information on Hortonworks services, please visit either the [Support](#) or [Training](#) page. Feel free to [Contact Us](#) directly to discuss your specific needs.

RELEASE NOTES: Apache Ambari 2.6

The Ambari 2.6 Release Notes summarize and describe the following information released in Ambari 2.6:

- [New Features \[1\]](#)
- [Behavioral Changes \[1\]](#)
- [Patch Information \[3\]](#)
- [Known Issues \[3\]](#)
- [Fixed Issues \[3\]](#)

1.1. New Features

The Ambari 2.6 release includes the following new features:

Table 1.1. Core Ambari

Feature	Description
Ambari Metrics System - Distributed mode with multiple Collectors (General Availability) AMBAR-15901	The Ambari Metrics System now supports multiple Metrics Collector instances, providing High Availability and better scalability. AMS High Availability
Solr Data Manager script to easily delete, archive, or save index data AMBAR-21810	The Solr Data Manager script allows operators to easily archive and purge logs and audit data stored in the Ambari Infra Solr Instance. Archiving and Purging Data

1.2. Behavioral Changes

Ambari 2.6 introduces the following change in behavior as compared to previous Ambari versions:

Ambari Blueprint Stack & Repository Version Behavior Change

In Ambari 2.6.0, the Ambari upgrade framework has been updated to set the stage for automated patch application and management. This feature will be available in future versions of Ambari. Due to these changes, the logic used to identify the repo version to be used during a Blueprint install has changed. This change only impacts Blueprint deployments. To ensure that Ambari uses the intended version of the repository for your install it's recommended first to register the desired version of HDP using a VDF file, and second to specify the version in your Blueprint explicitly.

If you do not register a VDF file and specify the repository_version_id, or repository_version during blueprint creation, Ambari uses the default repository version defined in the stack versions included with Ambari 2.6.0. Ambari identifies the default repository version using the hdp_urlinfo.json's "latest-vdf" if that is available and defined. Otherwise, Ambari uses

the stack metainfo.xml to identify the default repository version based on the stack_version defined in your Blueprint.

To register a VDF file and specify the repository_version_id, or repository_version during blueprint creation:

Registering a VDF file

The version_definitions API should be used when registering a VDF file. The example command below shows how to register the 2.6.3.0-235 version of HDP using the publicly available VDF file:

```
curl -v -k -u admin:admin -H "X-Requested-By:ambari" -X POST
http://ambari.server:8080/api/v1/version_definitions \
-d '{
  "VersionDefinition": {
    "version_url":
"http://public-repo-1.hortonworks.com/HDP/centos6/2.x/updates/2.6.3.0/HDP-2.6.
3.0-235.xml"
  }
}'
```

If the publicly available VDF file is not reachable from your installation, you can use a VDF file that has been downloaded to the local file system of the Ambari Server:

```
>curl -v -k -u admin:admin -H "X-Requested-By:ambari" -X POST
http://ambari.server:8080/api/v1/version_definitions \
-d '{
  "VersionDefinition": {
    "version_url": "file:/tmp/HDP-2.6.3.0-235.xml"
  }
}'
```

The response from this request will give you a unique id for the version that has been registered. For example:

```
{
  "resources" : [
    {
      "href" :
"http://ambari.server:8080/api/v1/version_definitions/51",
      "VersionDefinition" : {
        "id" : 51,
        "stack_name" : "HDP",
        "stack_version" : "2.6"
      }
    }
  ]
}
```

Specifying Registered Versions in Blueprints

When registering a Blueprint, to ensure the Blueprint install uses the version referenced in the previously registered VDF, either reference the id, or the specific version in the “Blueprints” definition section. Examples of both are provided below:

Blueprint repository version reference by id:

```
...
"Blueprints" : {
  "repository_version_id": 51,
  "stack_name" : "HDP",
  "stack_version" : "2.6"
}
...
```

Blueprint repository version reference by version:

```
...
"Blueprints" : {
  "repository_version": "2.6.3.0-235",
  "stack_name" : "HDP",
  "stack_version" : "2.6"
}
...
```

1.3. Patch Information

Ambari 2.6 is based on Apache Ambari 2.6.0.0 and the following patches.

Table 1.2. Apache Ambari 2.6 Patches

Apache Jira	Description
AMBARI-22299	Storm View: Update Node version for PPC support
AMBARI-22306	Set versionAdvertised to false for tech preview and add superset definition
AMBARI-22312	Downgrade From HDP 2.6 to 2.5 Leaves 2.6 Hosts as CURRENT Instead of INSTALLED
AMBARI-22318	NN Restart failed during IOP-HDP Migration in IBM PPC
AMBARI-22321	Add Registry StackFeatures to HDP StackFeatures

1.4. Known Issues

Ambari 2.6 has the following known issues, scheduled for resolution in a future release. Also, refer to the [Ambari Troubleshooting Guide](#) for additional information.

Table 1.3. Ambari 2.6 Known Issues

Apache Jira	HWX Jira	Problem	Solution
AMBARI-22323	BUG-90852	If IOP Migration documentation is not followed closely, the "Remove IOP Select" button may not be available in the Ambari UI.	If that has happened to you, you must run the following command on all hosts in the cluster: <code>rpm -e --nodeps iop-select</code>

1.5. Fixed Issues

The following table lists selected issues resolved in Ambari 2.6:

Version	Category	Apache Jira	HWX Jira	Summary	Components
2.6.0.0	Other	AMBARI-22056	BUG-88647	Solr Data Manager script should use gzip compression type	Ambari
