### 1.3.3. Unsupported Customizations

Hortonworks cannot guarantee that default NiFi processors are compatible with proprietary protocol implementations or proprietary interface extensions. For example, we support interfaces like JMS and JDBC that are built around standards, specifications, or open protocols. But we do not support customizations of those interfaces, or proprietary extensions built on top of those interfaces.

## 1.4. Deprecated Technologies

This section points out any technology from previous releases that has been deprecated or removed from this release (operating systems, Java versions, databases, product features). Use this section as a guide for your implementation plans.

Deprecated	Technology that Hortonworks is removing in a future release. Deprecated items are supported until they are removed; deprecation gives you time to plan for removal.
Removed	Technology that Hortonworks has removed from production and is no longer supported.

**Table 1.2. Deprecated Operating Systems**

Operating System	Release Deprecated	Release Removed
Debian 6	HDF 2.1.2	HDF 3.0.0

## 1.6. Common Vulnerabilities and Exposures

The following CVEs have been fixed in HDF 3.0.2.

### 1.6.1. CVE-2017-12623

**Summary:** Apache NiFi XXE issue in template XML upload

**Severity:** Medium

**Versions Affected:** Apache NiFi 1.0.0 - 1.3.0; HDF 2.x, 3.0.0 - 3.0.1.1

**Impact:** An authorized user could upload a template which contained malicious code and accessed sensitive files via an XML External Entity (XXE) attack.

**Recommended Action:** The fix to properly handle XML External Entities was applied on the Apache NiFi 1.4.0 release. Users running a prior 1.x release should upgrade to the appropriate release. HDF users should upgrade to HDF 3.0.2.
